**debian**

the universal operating system
est. 1993

Debian is a **free operating system** for computers of all kinds. It offers 64,000+ completely free packages of applications and tools, including software for businesses, programmers, scientists, educators, and artists.

Continuous improvements and timely security updates are provided by an open community of hundreds of volunteers with subject area interest and expertise in the software they maintain – and all of the source code for that software is available for you to read, edit and redistribute.

You can try Debian out without affecting your current operating system by using a 'live' image, and if you like it, you can install Debian to the computer's storage. For download links and to learn more, scan the QR code above or visit the website: https://www.debian.org
